# Measurement Guide

## Step-By-Step Measuring Guidelines

Use these measuring guidelines in order to get a more accurate estimate. We recommend that one of our representatives take final measurements before ordering any cabinets.

### Step 1: Begin by measuring the room wall-to-wall.

(You will be recording all measurements in INCHES.)

Example: 108", not 9')

**Step 2:** Make a rough drawing of the shape of the room. Represent each wall, door, window and any protrusions on recessed areas. This plan does **NOT** need to be 'to scale'. Print out a grid, or do it free hand.

Only accuracy counts, not talent!

### Step 3: Measure each wall section and record on the drawing. (A wall section is from one corner to a door way or window.)

Measure each window and door and record. NOTE: windows and doors are measured from outside edge to outside edge of casing or trim.

### Step 4: Add up all dimensions on each wall and verify that the total is equal to the total wall dimension listed on the chart.

(If not, re-measure!)

### Step 5: Locate the center line of the sink, by measuring from one corner of the wall. Record this dimension on your rough drawing.

On a separate grid, take horizontal measurements of where the cabinets will be installed.  
See example below:

- A** Measure entire wall from left to right.
- B** Measure from ceiling to floor. (Please indicate if you have soffits)
- C** & **D** Measure horizontal wall spaces between doors, windows, wall openings, etc.
- E** & **F** Measure vertical wall spaces above & below windows, above doors.
- G** Measure from one corner of the wall to the center of sink drain and water lines.
